

STAINLESS STEEL EXPANSION VESSEL SUPPORT KIT FOR DHW (AISI-304 stainless steel support)

OBJECT

The purpose of this product is to support the expansion vessel (from 5 to 40 liters) of domestic hot water installations. In addition, it guarantees the correct operation of the installation, as it has all the centralized security and control elements all of them at the same point.

APPLICATIONS

The application for which it has been designed is for domestic hot water installations. For any different application, please ask our technical department.

ADVANTAGES

Regardless of the ease of having all the centralized security and control elements at the same point of the installation, this KIT offers the advantage of not having to empty the DHW circuit to replace the expansion vessel. This change can be made even with the installation running.
